Ao LIU

Ph.D. in Computer Science

Research Software Engineer at Google Core ML
Mountain View, CA
aoliu.cs@gmail.com
aoliu-cs.github.io

Summary

Research Interests Machine Learning (Recommendation Systems, Learning to Rank, Algorithm Design, etc.), Differential Privacy, Computational Social Choice, and Quantum Computation

Experience 1+ years of industry experience in personalization, recommendation systems, LLM, theoretical computer science, differential privacy, and adversarial robustness

Academia Published 20+ papers and received 250+ citations to date.
Reviewed 50+ papers for top AI conferences or journals.

Education

01/2018 – 05/2023 **Ph.D.** in **Computer Science**, Rensselaer Polytechnic Institute (RPI) Troy, NY
Thesis: *Group Decision Makings from Partial Preferences* **[Link]**

08/2015 – 05/2018 **M.Eng.** in **Material Engineering**, Rensselaer Polytechnic Institute (RPI) Troy, NY
Focus on optics and polymer physics, received Presidential Graduate Research Fellowship

08/2010 – 05/2014 **B.S.** in **Mathematics and Physics**, Tsinghua University Beijing, China
Minor in Computer Technology, and *in Academic Talent Program*

Experience

07/2023 – Present **Research Software Engineer** at **Google Core ML** Mountain View, CA
Design and Research More Efficient Transformers for Recommendation Systems

05/2022 – 08/2022 **Research Intern** at **Google Core ML** Mountain View, CA
Project: Unbiased Learning to Rank with a More Accurate Position Bias Estimator
- Significantly more accurate (∼8%) on predictions *v.s.* state-of-the-art without any cost
- Proposed a novel probabilistic model to more accurately estimate position bias and designed an unbiased recommendation system based on it.
- Implemented the data pipeline and machine learning algorithm for the proposed unbiased recommendation system. Integrated all into Google codebase. (Python, TensorFlow, C/C++)

08/2018 – 12/2018 and 05/2019 – 08/2019 **Visiting Scholar** at **MIT-IBM Watson AI Lab** Cambridge, MA
Project: Certifiably Robust Interpretation via Rényi Differential Privacy
- Delivered one academic paper (on top AI journal and conference) and two patents.
- Significantly more robust (∼12%) and more accurate *v.s.* state-of-the-art without any cost. Note that we improved two trade-off properties at the same time.
- Designed the first-ever algorithm with theoretically guaranteed top-k robustness against ℓ_∞-norm attacks, where the theoretical proofs use Rényi differential privacy.
- Implemented the proposed robust algorithm and tested its robustness, accuracy, and computational efficiency on various tasks, including neural network interpretation, image classification, and objective detection. (PyTorch, TorchRay, TensorFlow, MATLAB)

Skills

Implementation Python, C/C++, MATLAB, TensorFlow, PyTorch, TorchRay, LaTeX

Design/ Theory Algorithm design, Time&Sample-complexity analysis, User-modeling, MCMC, Statistics, Privacy analysis, Robustness analysis, Model identifiability, Smoothed analysis

Review Services

Journal Information Sciences, TMLR, ACM ToIS, Sankhya B

Conference NeurIPS (20,21,22&23), ICML (22,23&24), ICLR (23&24), AAAI (21&22), IJCAI-22

Selected Publications
